

Choosing the anti-aging treatment that's right for you.

It's a good idea to know what you would like to get out of your treatment. A clear and open conversation with your doctor is important. We want to make sure you get all the information you need to make the decision that is right for you. So consider whether the following are important to you:

- Gradual effects that work over time, not overnight
- A look that's not obvious and doesn't look like I've had work done
- A treatment that replaces lost collagen
- Proven results that can last up to two years

Being prepared can get you the information you need to make the right decision for you. Here are some questions about Sculptra® Aesthetic (injectable poly-L-lactic acid) that we can answer for you:

- How does Sculptra Aesthetic work?
- Will it make me look like I've had work done?
- Is there any other treatment that works like Sculptra Aesthetic?
- I know that more than one treatment session may be required. How many do you think I would need?
- How long might the treatment effects last?
- What are the possible side effects of treatment with Sculptra Aesthetic?
- When can I expect to see results?
- How soon after treatment can I resume my normal activity?
- Is there any ingredient in Sculptra Aesthetic that I may be allergic to?

Be sure to tell us about all the medicines you are taking, even over-the-counter products or treatments. Use in the skin near the eyes is not recommended.
